Introduction

The window Object

Timers

The location Object

The document Object

Selecting DOM Objects

Modifying DOM Objects

The window Object

window

Properties	Methods	Events
document	alert()	(not common)
console	back()	
innerHeight	confirm()	
innerWidth		
pageXOffset		
pageYOffset		

Timers

setTimeout()

```javascript
let timeoutId = setTimeout( function() {

    console.log('1 second passed');

}, 1000);

// if need to cancel . . .

clearTimeout(timeoutId);
```

setInterval()

```javascript
let intervalId = setInterval( function() {

    console.log('1 second passed');

}, 1000);

// if need to cancel . . .

clearInterval(intervalId);
```

The location Object

location

Properties	Methods	Events
href	assign()	(not common)
hostname	reload()	
port		
pathname		
search		

The document Object

document

Properties	Methods	Events
body	createElement()	onload
forms	createEvent()	onclick
links	getElementById()	onkeypress
	getElementsByClassName()	

Selecting DOM Elements

Selecting DOM Elements

```
document.getElementById('elementId');

document.getElementsByClassName('className');

document.getElementsByTagName('tagName');
```

Modifying DOM Elements

Modifying DOM Elements

```javascript
let element = document.getElementById('elementId');

element.textContent = 'new text here';

element.setAttribute('name', 'nameValue');

element.classList.add('myClassName');

element.style.color = 'blue';
```

Summary

The window Object
- the global object

Timers
- setTimeout()
- setInterval()

The location Object
